

WE KEEP YOUR EYES ON THE ROAD

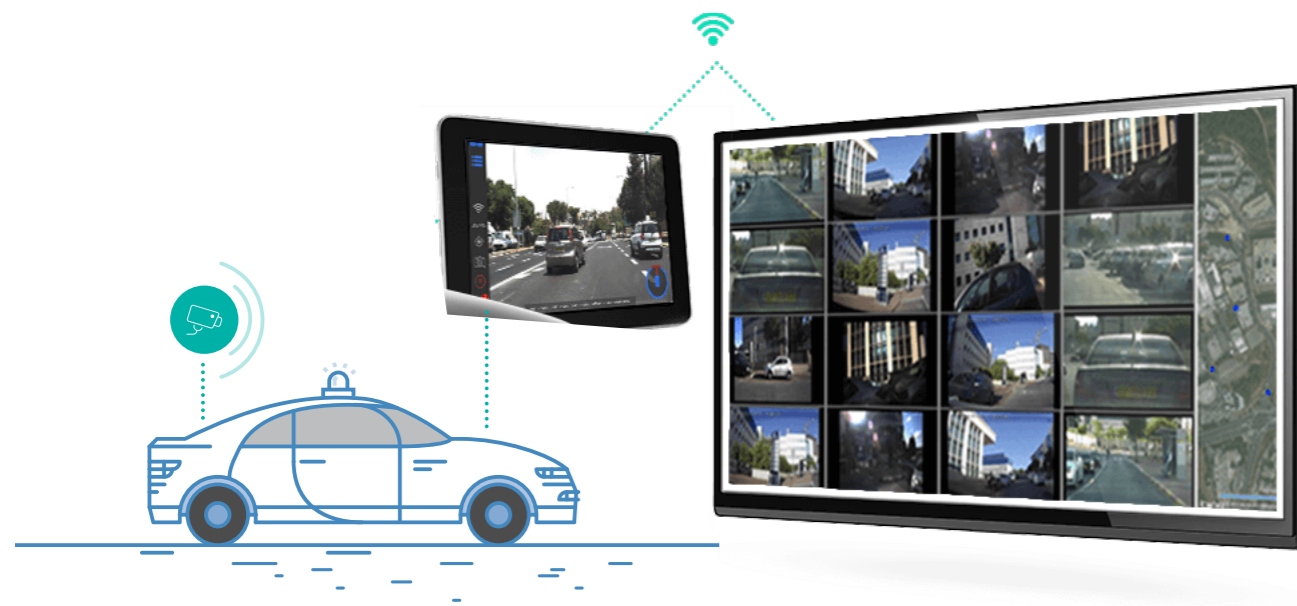

PUBLIC LANE ENFORCEMENT SYSTEM

Solutions for More Effective
Traffic & Law Enforcement

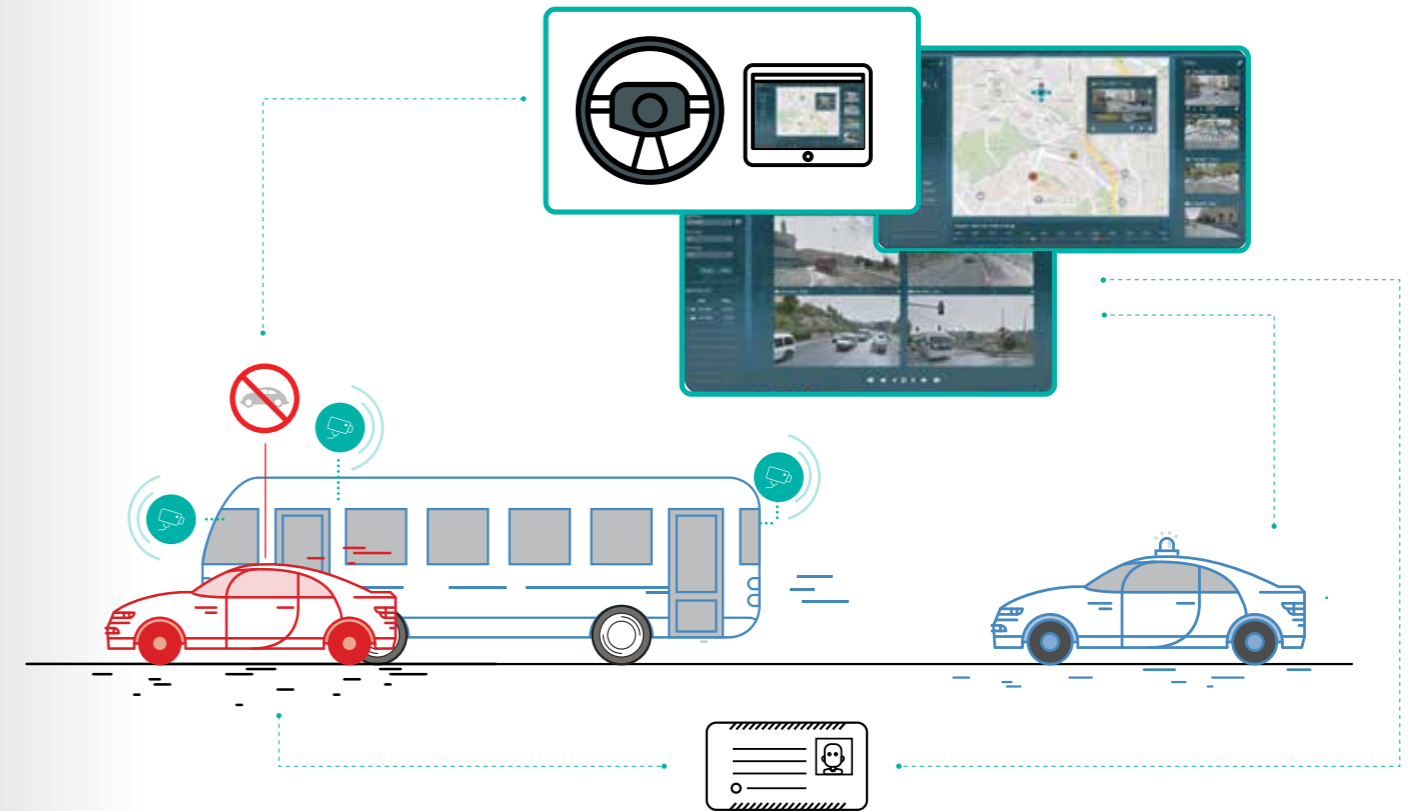

Introducing RoadMetric's Public Lane Enforcement System (PLES), a new direction in enforcement of public transport lanes.

PLES offers a more efficient, more effective alternative to the fixed camera/fixed location installations that provide limited enforcement of public transport lane traffic.

INVEST IN THE SAFETY OF YOUR ROADS

System Features

Automatic start

Automatic violation detection

Video stream with frame-by-frame capture and ANPR

Automatic data upload to server when in range

Data storage, including searching, matches collected data with data from other lists to catch repeat violations

Public Lane Enforcement System also offers an optional upgrade of the system that allows the driver to manually create events at the press of a button.

RoadMetric's Public Lane Enforcement System Smart Solutions for More Effective Traffic & Law Enforcement

System Components

The system comes with a full range of management and permission tools, allowing the manager to update bus lanes, operating times, and licensed cars as well as other user and management updates..

Public Lane Enforcement System includes:

- An in-car unit with one short range and one long range full HD video camera WiFi uploader and GPS locator as well as the LPR and photo analytic application. All the driver needs to do is turn the bus on and off as usual. He will never even realize it's there.
- Server and AC protocol-compatible WiFi receiver. When the bus returns from its route all the data in the bus processor is uploaded to the network, allowing an operator to view, confirm offences and, using the system's LPR application, convert the data to a citation, storing the evidence for future need.

What is RoadMetric?

RoadMetric is an innovative technology company offering the latest smart-in-car video systems for the collection of crucial intelligence and data in real time while patrolling the streets of your community. Established in 2007, The company designs, manufactures and markets enforcement tools which are changing how law is enforced and ensuring the safety of your streets and officers.
