

WE KEEP YOUR EYES ON THE ROAD

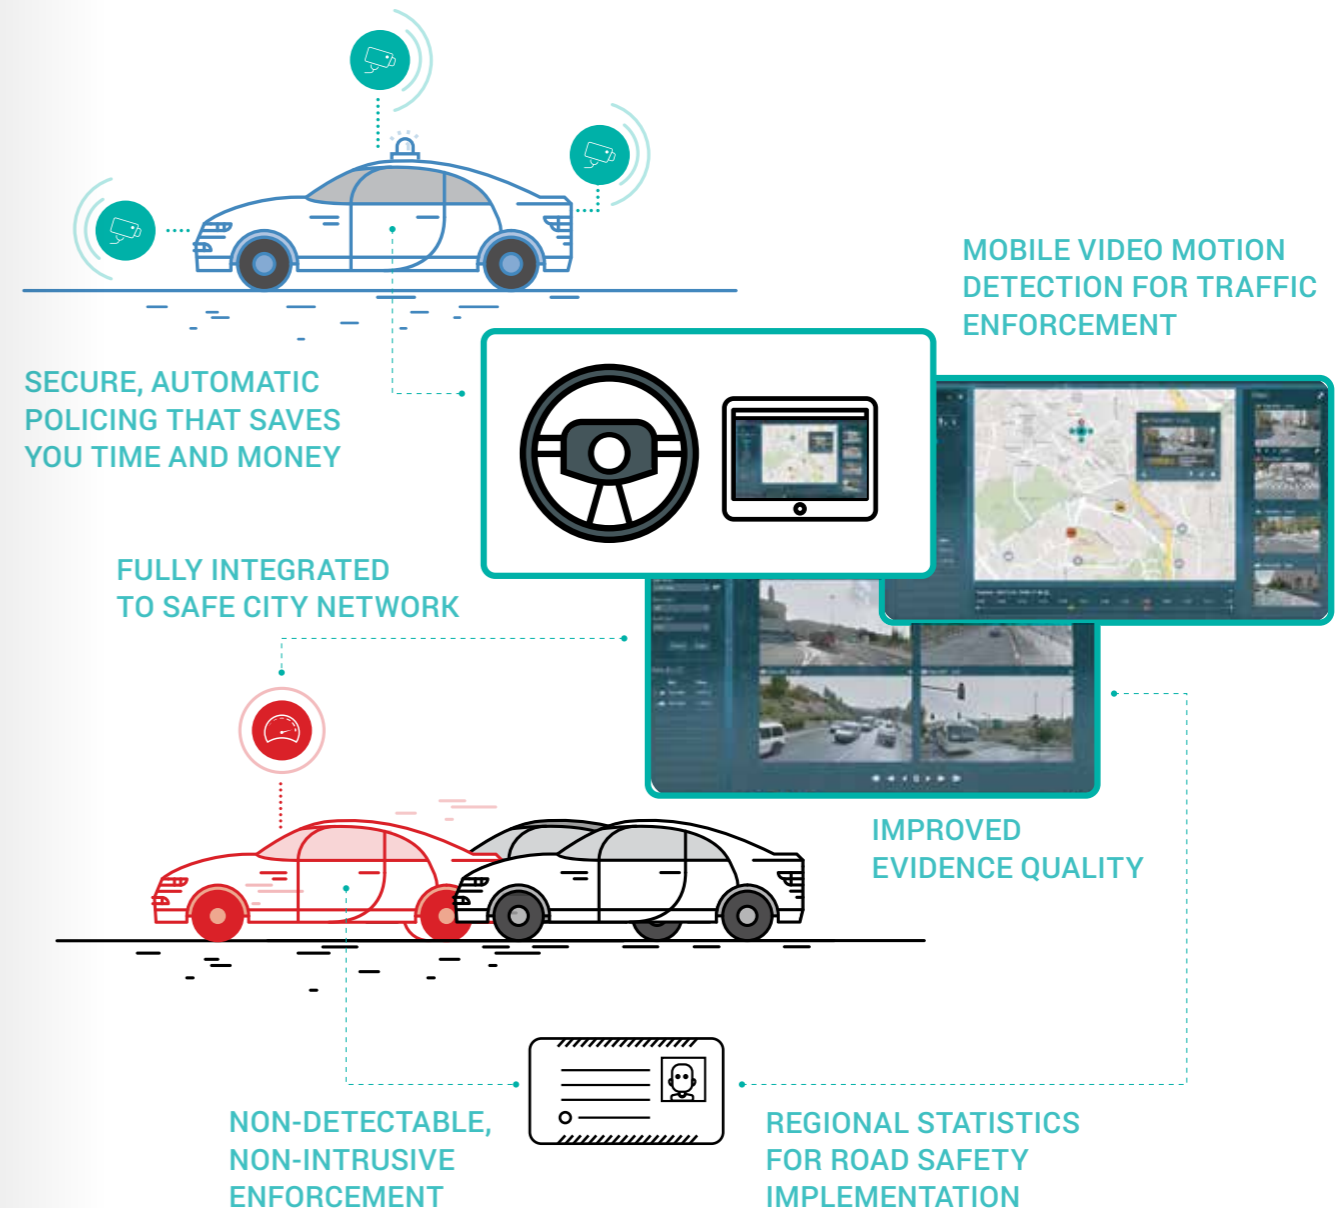

ENFORCEMENT DEPUTY™

Solutions for Safer, More Secure,
Effective Traffic & Law Enforcement

Introducing RoadMetric Enforcement Deputy™, the trail-blazing mobile video motion detection tool for traffic enforcement.

Enforcement Deputy™, is the first system to put all the applications you need to make the roads safer for drivers and pedestrians into a single, easy-to-operate platform you can activate at the touch of a button or the sound of your voice.. Enforcement Deputy™ enables you to collect crucial intelligence in real time while you patrol the streets.

Features include

180-360 degree Video Surveillance

You can implement the basic surveillance application now, then expand its capabilities later by adding more advanced applications, such as ANPR or RoadMetric's unique traffic enforcement application, which processes recorded video/ audio data into evidence files and issue citations at a later date.

Video Streaming

Mobile ANPR (LPR)

Enforcement Deputy™, is already being used by law enforcement agencies throughout Asia and the Middle East, providing safety and security with increased efficiency, while saving money and lives.

Data Analytics

System Components

The basic Enforcement Deputy™ system consists of a fully-integrated fleet of vehicles equipped with in-car video detection and monitoring tools all linked to a central command station supporting back-end processing. This allows law enforcement agencies to gather video data that can be analyzed and applied to detection, data gathering, crime prevention and solution, and used as evidence in court. A wireless microphone records continuous audio data documenting all ambient noise as well as any comments or observations made by the officer in the course of duty

In-car equipment includes

- Processing unit – vehicle data recorder
- Front/rear camera
- Side camera
- GPS receiver/antenna
- Manual control unit
- WiFi upload to back-end server
- Optional roof- and dashboard-mounted cameras (optional upgrade)
- Body-worn wireless microphone and camera (optional upgrade)
- LCD touch-screen monitor

The basic system is easy to install, operate and maintain. It is fully interoperable and can integrate with your existing Safe City Network programs.

What is RoadMetric?

RoadMetric is an innovative technology company offering the latest smart-in-car video systems for the collection of crucial intelligence and data in real time while patrolling the streets of your community. Established in 2007, The company designs, manufactures and markets enforcement tools which are changing how law is enforced and ensuring the safety of your streets and officers.
